## COMPANY OVERVIEW

In 1964, Emmert International opened its doors in Portland, Oregon, as a house and small building Relocation Company. As we perfected our craft, our clients asked us to meet greater challenges by relocating larger buildings and large scale equipment components. At the time, conventional jacking and dolly equipment did not accommodate these difficult transportation projects; therefore, Emmert International developed and manufactured a new generation of transport dollies and jacking systems. These elegantly simple dollies and jacks are still the benchmark of equipment used in the specialized transportation and rigging industry.

Quality people. Quality projects. By land, sea, or rail, Emmert International employs first-in-class professionals recognized by numerous industry awards for safety and performance. Our people have won accolades from clients, engineers, and governing authorities on our safe, innovative project plans and expert execution. With years of experience, commitment to safety and customer satisfaction, Emmert International has, and will continue to, take on the largest, most difficult projects. To some what we do is impossible, but to us it is what we do everyday. Emmert International specializes in heavy haul transportation and rigging services, providing customers with **state-of-the-art transportation solutions on a global level**. We design, engineer, and manufacture our own specialized equipment necessary to execute the most uniquely customized and difficult projects in the world.

Our line of specialized transportation and heavy rigging equipment is engineered and built specifically for the unique demands of the most challenging super heavy haul and heavy rigging projects. When you choose Emmert International as your engineered transportation and heavy rigging specialist, **you gain over 40 years of moving expertise, engineering knowledge, and state-of-the-art manufacturing capabilities; all from one provider.**

Whatever the industry and whatever the project, Emmert International's **dedicated professionals** are here to provide award winning customer service and support. Our team of **engineering experts and logistics specialists** can take on the most demanding of challenges ensuring that your specialized transport and rigging projects are **done safely, on time, and within budget**. Emmert International stands on the cornerstone of over **40 years** of innovative customer solutions, which is why we say **"Yeah, we can move that."**

## MARKETS

### Power, Oil, Gas, and Chemical

Emmert International has been designing and implementing engineered transportation and heavy rigging systems for the power, oil, gas, and chemical industries for generations. Our **integrated manufacturer-to-rough set approach** has enabled us to move some of the largest equipment from the supplier to foundation. Our dedicated and professional management, logistics personnel, and responsive safe crews have been able to exceed deadlines during the most critical equipment

change-outs and shutdowns **resulting in significant savings to our customers**. Emmert International has successfully completed projects from nuclear power to offshore oil rig transportation earning the respect and repeat business of our clients.

### Aerospace

With Emmert International's vast logistical knowledge, transportation expertise, and well-maintained specialized equipment, we have earned the respect and business from leading aerospace companies. As a leader in specialized transports and specialized rigging, we have provided consulting, operational support, and transportation services for several prominent deliveries, including, the **Hubble Space Telescope**, The Boeing Company's **Delta IV Rocket Program**, and the relocation of the Howard Hughes **HK1-Spruce Goose** from California to Oregon.

### Marine

Over the years, Emmert International has developed successful long-term relationships with barge and ocean transport shipping companies. These relationships, along with our innovative engineered roll-on roll-off techniques, have made Emmert International a **leader in integrated barge-to-land transport**. Emmert International also designs fully integrated transportation systems for the marine industry. Emmert has launched vessels ranging from personal yachts to **3000-ton commercial ships**. In addition, we can help with logistics related to barge only and integrated barge-to-land transportation.

### Structure Relocation

Emmert International offers a wide variety of residential, commercial, and industrial building relocation and shoring services. Since 1964, we have been a leader in historic property transports, homestead relocation, house and roof lifts (to facilitate vertical expansions) and shoring projects. Over the years Emmert has moved thousands of residential homes, historic houses, and hotels. Emmert International is a **leader in recycling, having saved over a half a billion dollars in building materials, demolition, labor and landfill costs**, by relocating structures that would have otherwise been demolished.

## SERVICES

### Rigging

Emmert International maintains a large inventory of state-of-the-art tested and inspected rigging, including specialized spreader beams, wire and alloy slings, lifting clamps and beam clamps at our locations located throughout the United States. Coupled with the knowledge of our experienced project managers and rigging experts, Emmert International is particularly qualified to successfully complete any heavy lift and rigging project.

### Hydraulic Gantries

Our gantries employ telescopic octagon booms with automatic camlock systems. They have synchronized proportional control with planetary self-propel and can be operated on diesel, propane or electric power. Emmert International's hydraulic gantries have a **capacity ranging from 350-tons to 700-tons**. Combined with our flexible track system, our hydraulic gantries can be used in a variety of configurations for customized rigging applications. By combining our Hydraulic Gantry systems with our rail, highway, and marine transportation services, we can provide supplier to foundation transportation and rigging services.

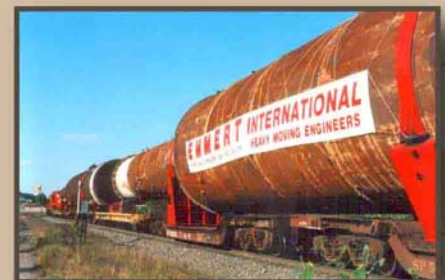

### Lift Tower

The Emmert Tower Lift System is ideal for heavy lifts in tight spaces. It is **very compact, inherently stable** and requires a minimum of guying. The system design allows shipment in 40-ft. lengths to keep mobilization costs down. As a temporary support structure, the Towerlift system can be used in various ways to produce the most economical lifting arrangement. Strand jacks can be stationary or mounted on movable beams to traverse loads.

### Rail

To ensure that we can meet the needs of our clients, Emmert International owns and maintains a fleet of specialized railcars including 45-foot, 12-axle deck rail cars with a 740,000-pound capacity and a 20-axle Schnabel car capable of transporting 1 million pounds. Over the years, we have developed relationships with the leading railroad companies that provide us with a competitive edge. Our ability to track shipments, and accurately calculate arrival dates, has led to **efficient rail transports**, which equates to a cost savings for our clients. This coordinated effort has allowed Emmert International to be an **industry leader in the utilization of rail transport** for heavy equipment moves.

## SERVICES

### Specialized Transportation

Our success in the heavy transportation industry can be attributed to our creative and innovative professionals using our **state-of-the-art equipment**, which is **engineered, manufactured, and serviced by Emmert International** for heavy haul projects throughout the world. We are able to configure our equipment into **transportation systems** that accommodate the relocation of any type of **heavy, over dimensional equipment, buildings, or other unique structures.**

Our fleet of specialized equipment includes our unique transportation dollies rated at **35, 50, 60 and 70 tons**, self-propelled hydraulic platform trailers capable of moving **10,000 tons**, prime movers, dolly beam transport systems, low bed trailers, **128-axle** lines of Goldhofer trailers, customized over-the-road transport systems, specialized marine loading components, and **customized railcars.**

Over the past **40 years** we have solved some of the most difficult transportation problems working with engineers, clients, and manufacturers to overcome some of the most challenging projects in the industry. **Our design** of the **safest, most efficient transportation solutions** has earned us multiple **transportation and trucking awards.**

In fact, our unique equipment configurations have allowed Emmert International to relocate such notable objects as Howard Hughes **Spruce Goose Airplane**, the **Hubbell Telescope**, and the **3.2-million pound Fairmont Hotel** in San Antonio, Texas, which **won us a place in the Guinness Book of World Records** and over **twenty plus industry awards.**

## OBJECTIVE

### MISSION

Emmert International is committed to providing innovative specialized transportation and rigging solutions and technologies to our customers. We will achieve the highest standards of safety and performance to ensure our position as a world-class leader in the specialized transportation and rigging industry.

### VISION:

We will provide:

The industry's best trained, safest, world class personnel.

World class state-of-the-art transportation and rigging equipment.

First class industry leading service to internal and external customers.

Commitment to solutions to any specialized transportation and rigging need.

Sustainable long-term growth providing our employees with career opportunities.

We will exceed the expectations of our clients.
